5) (Placeholder) CFG Validation – Test Design

When your teammates build CFG/textX:

ID	Scenario	Input	Expected
G1	Valid structure	hello #a http://a.com	Parsed successfully; "valid"
G2	Invalid hashtag form	hello #	Parse error / invalid
G3	Enhancements inc. LaTeX	include $A_1 + B_2 = n^2$	Parser accepts and renderer shows math (as per doc)
